

## **Firmware update 7.8+**

**Important Note:** 8424 Console Firmware 7.8 and above include a new recall procedure for the motorized faders. This change improves fader recall.

If you have recall stores that you wish to preserve after the update, please follow the steps below before performing the version 7.8+ firmware update.

- ▶ **First, backup all current recall stores to the DAW computer using the 8424 app.**

Instructions on how to do this are found on pages 81-84 of the 8424 user Manual Issue 4.1+

<https://amsnevermx.sharepoint.com/:b:/s/SalesMarketing/EerN7PD1OcJOIqtK8TB3v94BvtMKpj94mLbwpuk5kklbBw?e=kt3HeD>

- ▶ **Once stores are backed up into the DAW computer via the 8424 app, perform the firmware update to version 7.8.**
- ▶ **Once the update is complete, stores from the 8424 app can be loaded back into the console memory.**
- ▶ **At this point the stores must be saved as new stores to refresh the console memory with the updated/improved fader positions**
