# ELEMENTS

## Put the music back in the box

### Introducing Neve Elements

Mixing in the box gave us the speed of modern studio workflow. But it never gave us the musicality of true analogue circuitry. It's time to put the music back in the box.

Neve Elements is an immensely flexibile ecosystem of interconnected, reference-quality Neve® analogue console circuitry combined with digital control and complete workstation recall.

### 88R EQ

- Neve® flagship 88R console four-band EQ circuitry.
- Definitive 88R EQ trusted by the world's best studios.
- Compact 2U unit with eight channels of authentic Neve® EQ.

### 88R Dynamics

- Neve® VCA compression, limiting, gating and expansion circuitry.
- 88R console dynamics architecture trusted by iconic studios.
- Eight channels of powerful dynamics control in a compact format.

### 1084 EQ

- Classic Neve® 1084 inductor-based three-band EQ circuitry.
- Favourite sound of the legendary Neve® Sound City 8028 console.
- Eight channels of unmistakable Neve® console EQ.

# Why emulate when you can have the real thing?

## Software controlled analogue hardware

Your Neve® is no longer defined by where the hardware is. The processing can be wherever it belongs in the studio, while its controls are wherever you want to work.

## Element Control Plugin

Control the Elements processors directly from your Digital Audio Workstation, with every Element setting recallable as part of the session itself, offering instant reset of all parameters.

## Neve Elements App

The dedicated Neve Elements App gives you the same graphical control when you want to work independently of the DAW. Either way, nothing about the sound is emulated. You are breaking out of the box into authentic Neve® analogue circuitry, controlling it precisely, recalling it perfectly, every time.

# Build your console. Grow your studio.

For hundreds of producers, artists and engineers, the 8424 has a proven track record of providing ultimate sound quality and modern versatile workflows. If a Neve® 8424 already sits at the heart of your studio, expanding your capabilities isn't a giant leap. It's a seamless evolution. Upgrade to 8424E, and your existing desk becomes the centre of a new environment designed to be tailored to your unique studio requirements.

The E-Controller provides you direct access to every connected Element in your studio. Every Elements processor you own is controllable from the desk itself, providing you with effortless control at your fingertips of authentic Neve® audio processing.

**Instant and intuitive command over every piece of studio magic.**

The E-Controller also contains two digitally controlled VCA compressors which can be placed across your mixbus, groups, or recording path, retaining the core 500 series smart-routing capability, providing instant reset of mixbus compression.

At the core of the upgrade sits the Elements Upstand Screen, a high resolution TFT touchscreen mounted to the console upstand. Connected Elements appear on it automatically, providing detailed control and visual feedback for every processor - meaning you never have to leave the sweet spot whilst making music.

If you already own an 8424, you're not building the Elements ecosystem from scratch.

**You already own the foundation to its centre.**

# 8424|E

## Your Project.
## Your Clients.
## Your Budget.

Neve Elements connects reference-quality analogue processors, the DAW and your console into a single integrated ecosystem.

The Elements ecosystem can be tailored to fit your unique workflow. Enjoy the freedom of choosing only what you want and only what you need, whether that is a single 1073 OPX or a full complement of EQ and dynamics across every channel. As your clients change, as your projects change, as your ambitions change, Elements evolves with you. Tailor your ecosystem to fit your needs now, and scale it, piece by piece, into the studio you are building for the future.

Build the studio your work demands, and not the one the catalogue dictates. This is not someone else's idea of a studio. It's yours, built one decision at a time.

**Your project. Your clients. Your budget.**

## Neve Elements Range

## Intelligent Insert Matrix

Each Elements unit features an intelligent insert matrix, seamlessly integrating authentic Neve® analogue processing with your favourite outboard equipment through the 8424E.

## Elements Upstand Screen

## E-Controller

## 1073 OPX

Build your ideal tracking configuration by combining up to three 1073OPX units with your 8424E, giving every channel on the desk its own dedicated 1073® mic preamp.

## Neve Elements App

## Neve Elements Plugin

# All Resettable.
# All Neve.
# All Definitive.

The 8424E is an international standard, fully resettable console, built to a breakthrough price. Its Marinair™ transformer-coupled stereo mix bus, derived from the iconic 80-series consoles, delivers the legendary Neve® sound every time you mix. Twenty-four channels, four mono groups and 48-mix capability give this small-format console the routing and summing potential of something far larger.

Each Elements box includes an intelligent insert matrix that functions as an uncompromising solution to combine Neve® analogue processing with all of your favourite outboard equipment through the 8424E. Elements greatly expands the 8424's insert capabilities, providing a flexible digital patch bay controllable from your DAW.

Every setting on the 8424E can be stored, recalled and trusted, session after session. **Total recall**™.

Advancing the art and science of recording since 1961.

Always Innovating.
Always Neve®.
